

c37.TumorBoard

Interdisciplinary treatment is central for successful cancer treatment. Physicians from different fields meet in tumor boards to review different cases and create customised treatment.

The integrated electronic support tool c37.TumorBoard can optimise the time requirement for the participants and helps to make the data, the recommendations and the customised treatment plan available for all physicians involved in the treatment.

The features of the c37.TumorBoard:

- Web-based support tool for Tumor Boards and optimised treatment management
- Structured therapy recommendations
- Standardised and organ specific tumour documentation
- Workflow support for Case Managers
- Extensive interface to the clinical systems (via HL7)
- GUI-Integration in hospital information system
- Multi-client capability
- Generic solution run capable in data centre
- Remote access for GPs via web
- Extensive analysis tool
